

86 Format Bevelled Faceplate

Description

The beveled RJ45 faceplate is used in data network communication and workspace. It cooperates with the multi-type modules of RJ45 to provide an extraction interface for information terminal data. Provide single port, double port, choice. Composite structure, with dust-proof door, effectively prevents water splashing and dust particles intrusion, with identification label for easy numbering management and maintenance.

Features & Benefits

- Compatible to RJ45 jack
- Dust-proof shutter
- With label management
- Work with 86 back box
- Material: ABS
